AI IN MY WORK

- Claude in Cursor, every day: implementation, debugging, and refactors on real repos
- I review the diff, run the product, and ship only code I can explain
- OpenAI GPT-4 and Hugging Face inside a live product, called from the server
- API keys and model calls stay off the client

SKILLS

- React.js / Next.js (App Router)
- TypeScript / JavaScript
- Tailwind CSS / responsive UI
- Node.js / Express
- Python / REST APIs
- PostgreSQL / Prisma
- MongoDB
- Git / GitHub / pull requests
- Linux, Vercel, Render

EDUCATION

Diploma in Business Information Technology
KCA University · 2026 – Present

Full-Stack Software Engineering
Moringa School · Feb–Nov 2025

PROFILE

Full-stack developer on retainer at ChainForge, building React/Next.js and Node.js products that go through review and ship. I use Claude as a delivery tool: I scope the task, use the model to implement and debug faster, then I check the running app and own the result. One developer working this way covers UI, API, database, and fixes on the same feature. I have also put models inside a product, not only inside the editor.

EXPERIENCE

Full-Stack Developer (Retainer)
ChainForge · Jul 2026 – Present · Nairobi

- Own feature delivery on live client projects: task branches, conventional commits, readable pull requests, and status updates.
- Use Claude in Cursor on those codebases to get from a ticket to a working change faster, then verify the feature in the running app before the pull request.
- Building Centurion Hotel, a Next.js 16 / React 19 / TypeScript property platform: multi-step booking, availability, admin modules, and M-Pesa / card-ready payment foundations.
- Delivered Chess47 from scratch (county map, articles, tournaments, leaderboards) through review cycles to a shippable product.

SELECTED PROJECTS

Eco-Hub — energy marketplace with product AI · React · Node.js · GPT-4 · Hugging Face · Live

- Connected GPT-4 and Hugging Face behind a Node API so unstructured user input became localized solar plans and marketplace pricing.
- Shipped with a student team to production on Render: eco-hub-trvd.onrender.com

Centurion Hotel — property platform · Next.js · TypeScript · Tailwind · 2026

- Guest site and admin: rooms, dining, events, offers, gallery, contact, and policy pages.
- Booking path from dates to confirmation, with availability scaffolding and payment reconciliation.

StreamList — media platform · Next.js · Express · PostgreSQL · Prisma · JWT

- Decoupled app with auth, Prisma migrations, and a server-side TMDB proxy so third-party credentials never reach the browser.
- Deployed on Vercel and Render with separate environments.

Chess47 — chess community platform · React · ChainForge · 2026

- Interactive county map, rankings, tournaments, and editorial flows, built end to end.

ALSO SHIPPED

- Associate Product Manager app: authenticated management UI, validation, and bug fixes from root-cause checks.
- Wanderlust, shipped, and ChessNest, product design, from earlier ChainForge delivery cycles.
